

In-Yacht End of the Year Recap!

By In-Yacht Team - December 2024

As the year draws to a close, we want to look back at some of the most prominent updates and new features we've launched this year. In the spirit of the season, we've gathered all the 2024 key highlights in one recap. This year has been full of growth and innovation, and we couldn't have done it without your trust and support. Whether you have been with us since the beginning or have just joined us, we are grateful to have you as part of our community

Wishing you a wonderful holiday season, and smooth sailing! 🚢 🌟 ❄️

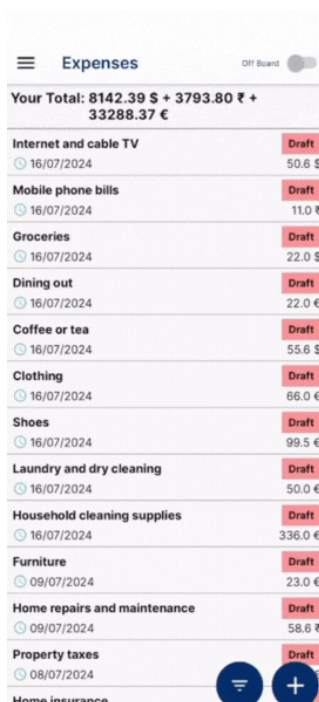

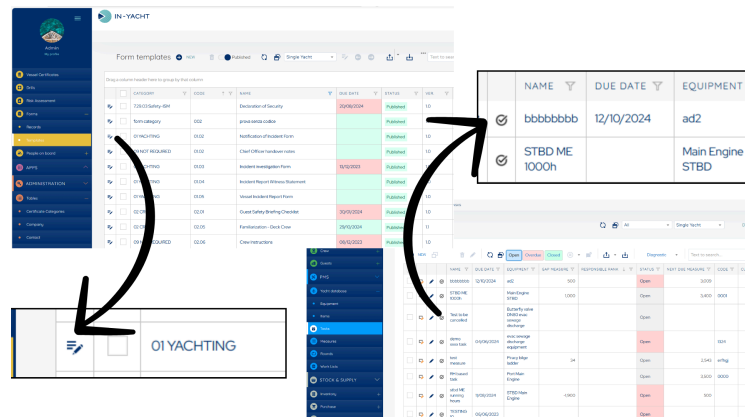

A completely new Calendar view for the Hours of Rest

One of the last key features we introduced this year, but also one of the more impactful.

The old list is now replaced by a more easy-to-read calendar with a legend that will make it faster to insert one or more shifts and will give you a clear overview of any non-conformities

Inline Actions

On tasks and forms, you will now find the most frequent actions conveniently on the line! Specifically the button to close a task and the button to fill in a form. We are working on expanding this change to other modules as well, so stay tuned!

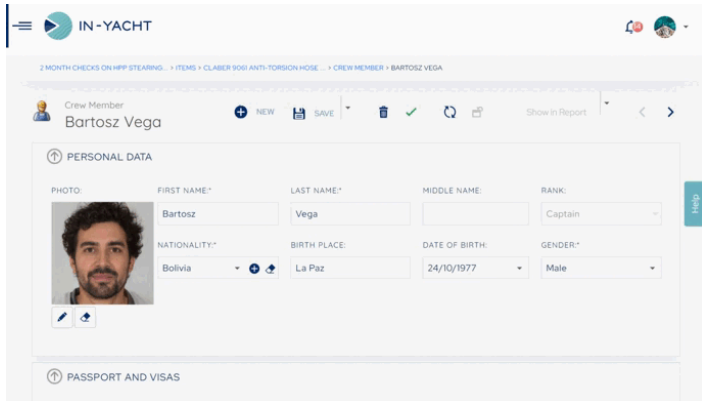

Mobile App New Finance features

In the Expense section you will now see the Total of your expenses also divided by Currency, plus you can now filter by active Budgets, that will change the total accordingly. This can be especially helpful to have a better overview of the ongoing charter directly from your phone.

Conditional Formatting

We know that reading and navigating through multiple data can be time consuming, especially in order to understand which data needs immediate attention. That is why we have added new conditional formatting in many places to help you when browsing and reading from tables.

[illegible]

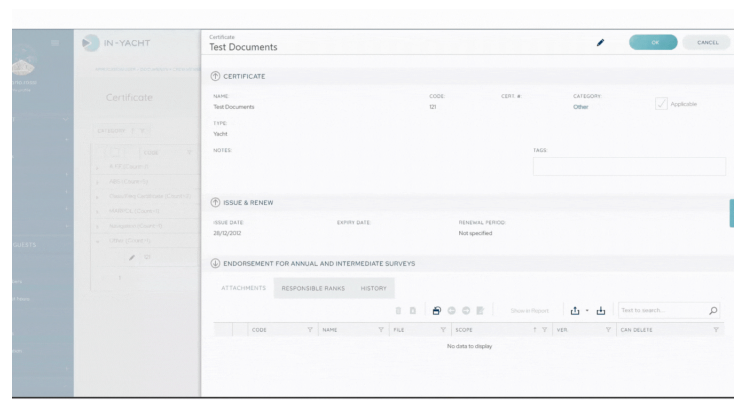

New Modules layout

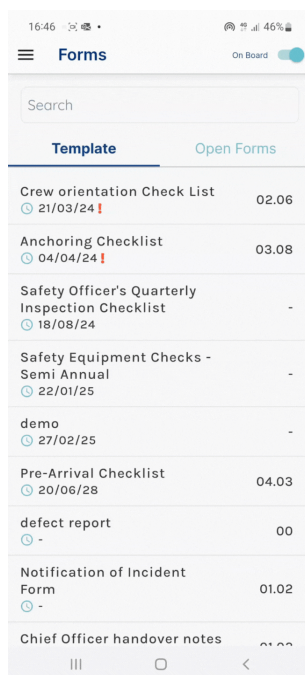

In our May update we introduced a reworked, clearer layout. Allowing to Expand or Collapse the various section depending on what you want to see.

The system will also save your menu layout for future visits!

Improved Drag&Drop feature

Drag&Drop is a feature that proved to be very handy. This is why we decided to focus on improving it further, making it possible to now upload far more documents at once, removing the limit in file size and quantity.

Mobile App new Open Forms feature

When we released our August update, we added the possibility to consult Forms already filled out from both Web and Mobile App but yet to be approved/closed. This to allow the possibility to start a form but finish it in a second moment, such as PTW.

<input type="checkbox"/>	02 CREW	02.01	Guest Safety Briefing Checklist	30/03/2024	Published	10	<input type="checkbox"/>
<input type="checkbox"/>	02 CREW	02.05	Familiarization - Deck Crew	29/10/2024	Published	11	<input type="checkbox"/>
<input type="checkbox"/>	08 NOT REQUIRED	02.06	Crew Instructions	08/12/2023	Published	10	<input type="checkbox"/>

Form Revision

If you need to keep tracks of all the amendments that are made in the Forms Templates, you now can! With this update we made it possible to revise Forms so that Managers or Officers can modify them to suit the needs while keeping all past records at hand.

Update measures when closing a related Maintenance Task

Whenever a task is closed as a result of reaching running hours, it will be possible to directly add the hour counter or measurement value from the task close action interface!

[Contact us](#) to share your suggestions to improve your work.

We are already working on the 2025 roadmap and your input might be in the next updates.

Stay tuned for more exciting news!
